Abstract—The value of business consulting has been increasingly proven with the advent of innovative third-party advisors (TPAs). The gap between traditional business practices (SMBs, SSBs, and SFTs) and advanced practices (SMBs, SSBs, and SFTs) made TPA an important business strategy. TPA can overcome the gap between SMBs, SSBs, and SFTs, and business consulting professionals in business operations, managing their advanced theory of work (TPA). The business consulting professionals in business operations (SMBs, SSBs, and SFTs) can improve their business operations. This paper provides a comprehensive review of the advanced TPA strategies, serving businesses. Besides, their strategy performance in various business operations. Finally, the paper focuses on such business TPA and its importance in the specific business of business. The empirical analysis can help business managers, business development of more efficient services, and business consulting by developing the business operations of business consulting.

Monoclonal antibody synthesis has involved genetic fusion of the two cell sources, either an antibody-producing B-cell clone or a myeloma cell line, to produce monoclonal hybridomas (HAT) (1). The cell fusion is generally mediated by fusion, aggregation, infection or other nonchemical approaches. However, the cell fusion efficiency is often low and the cell fusion process is often laborious and time-consuming. In this paper, we report a novel method for the fusion of B-cells and myeloma cells, and the production of monoclonal antibodies. The fusion efficiency is high and the cell fusion process is simple and easy to perform. The fusion efficiency is high and the cell fusion process is simple and easy to perform. The fusion efficiency is high and the cell fusion process is simple and easy to perform.
